Digital modeling and fabrication is a design and production process that combines 3D modeling or computing-aided design (CAD) with additive and subtractive manufacturing. Additive manufacturing is also known as 3D printing, while subtractive manufacturing may also be referred to as machining, [1] and many other technologies can be exploited to physically produce the designed objects.

Digital modeling and fabrication - Wikipedia

Professional modeling is the foundation of every aspect of the 3D production pipeline and is essential to the success of any 3D computer graphics project. [digital] Modeling is unlike any other modeling book you've seen—it gets to the core of what it takes to create efficient production-ready models and demystifies the process of producing ...

We create a digital 3D model of the project in its existing state. We then create 3D models of each phase of construction. By comparing each phase to the previous we can determine the quantities of each type of material that is required in each phase. more
