Do you notice that when preheating your gas grill the inside temperature doesn't reach 500°F to 550°F, but stays around 250°F? You may have inadvertently caused your grill to go into what's commonly called "bypass" by activating the gas control safety device on the regulator. Not to worry, this video will take you through the few simple steps necessary to getting your Weber® Gas ...

### Ready to Cook, but your Grill Isn't? | Tips ... - Weber

Turn off all the burners and close the tank valve. Wait 60 seconds. Open the tank valve fully and wait a few seconds for pressure in the regulator and gas hose to equalize. Open the grill lid, then open one of the burner control knobs and light the grill. Turn all burners to HIGH and close the lid.

### Troubleshooting Low Heat or Weak Flame on Weber Gas Grills ...

First, turn in the mixture screw until the engine dies or runs worse, then back out the screw (recommend turning ¼ to ½ turn at a time). The engine should pick up speed and begin to smooth out. Back out ½ turn more, or until the screw does nothing or runs worse then turn back to the point where it ran its best.
